Certificate EN 50549-1:2019 with Ireland deviations

European Standard

Manufacturer	Guangzhou Sanjing Electric Co., Ltd.			
Address	No.9, Lizhishan Road, Science City, Guangzhou High-tech Zone, Guangdong, P.R.China			

Product Name	PV Grid-connected inverter			
Product Type	R5-3K-T2	R5-4K-T2	R5-5K-T2	R5-6K-T2
Max. AC Current [A]	3*5.0	3*6.7	3*8.4	3*10.0
Maximum Apparent Power [VA]	3300	4400	5500	6600
Product Type	R5-8K-T2	R5-9K-T2	R5-10K-T2	R5-12K-T2
Max. AC Current [A]	3*13.4	3*15.0	3*16.7	3*18.2
Maximum Apparent Power [VA]	8800	9900	11000	12000
Generating Unit technology	Three phase, transformerless, PV Grid-connected inverter			
Type Tested	Base on requirements EN 50549-1:2019			
Test Location	Guangzhou Sanjing Electric Co., Ltd. No.9, Lizhishan Road, Science City, Guangzhou High-tech Zone, Guangdong, P.R.China			
Test Date	2021-7-16 to 2021-7-18			
Compliant to	-Requirements to Type A Generation Unit. -Commisiong Regulation (EU) 2016/631 (NC RfG).			

Date:

2021.7.19

Signature:

Type Test Verification Report

Models R5-3K-T2, R5-4K-T2, R5-5K-T2, R5-6K-T2, R5-8K-T2, R5-9K-T2 R5-10K-T2 and R5-12K-T2 have the same structure, software logic and hardware structure. Except for the different model names, all tests are performed in R5-12K-T2.

Power Quality – Harmonics: These tests should be carried out as specified in EN 61000-3-12. The chosen test should be undertaken with a fixed source of energy at two power levels:

- a) between 45 and 55%, b) at 100% of Registered Capacity.

Phase L1		Power Generating Module rating per phase (rpp)		4	kVA	
Harmonic	At 45-55% of Registered Capacity		100% of Registered Capacity		Limit in EN 61000-3-12

Plt	0.142	Limit	0.65
Test Impedance	R	0.24	Ω
Standard Impedance	R	0.24 * 0.4 ^	Ω
Maximum Impedance	R	--	Ω

Applies to three phase and split single phase **Micro-generators**.

* Applies to single phase **Micro-generators** and **Micro-generators** using two phases on a three phase system.

For voltage change and flicker measurements the following formula is to be used to convert the measured values to the normalised values where the power factor of the generation output is 0.98 or above.

Normalised value = Measured value * reference source resistance / measured source resistance at test point.

Single phase units reference source resistance is 0.4 Ω

Two phase units in a three phase system reference source resistance is 0.4 Ω .

Two phase units in a split phase system reference source resistance is 0.24 Ω .

Three phase units reference source resistance is 0.24 Ω .

Where the power factor of the output is under 0.98 then the X to R ratio of the test impedance should be close to that of the Standard Impedance.

The stopping test should be a trip from full load operation.

The duration of these tests need to conform to the particular requirements set out in the testing notes for the technology under test. Dates and location of the test need to be noted below.

Power quality – DC injection				
Test power level	20%	50%	75%	100%
